

Please read this manual carefully before installing and using the spots. Do this for your own safety and to prevent damage of the product. This manual is applicable to the LED veranda surface-mounted spots. The set is delivered ready for use with the amount of spots you selected, including 5 meters cable per spotlight, 1 transformer with connector and 1 remote control (including batteries, holder and mounting material).

1

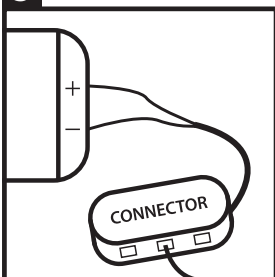

First, check whether all the parts are contained in the box, and test the set before installing it in its permanent place.

2

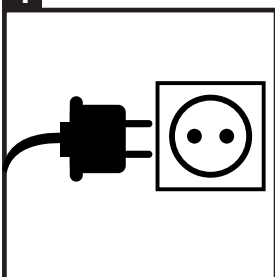

Drill the holes in the desired position in your veranda. First position the cables of the LED surface-mounted spotlight at the desired location. Attach the cables to the drill hole and screw the recess into the profile and click the LED surface-mounted spotlight into the recess.

3

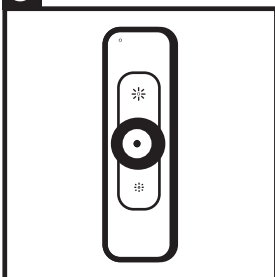

Subsequently, link all the spots to the connector. Not all ports need to be filled, as the system is connected in parallel. It does not matter if the connector contains more ports than the number of spots installed. You can leave these ports open.

4

Now you can connect the transformer to a 230V point.

5

The remote control is already programmed to the transformer supplied.

Your lighting is now ready for use. We hope you enjoy your purchase.
