

Please read this manual carefully before installing and using the spots. Do this for your own safety and to prevent damage of the product. This manual is applicable to the LED (veranda) recessed spots. The set is delivered ready for use with the amount of spots you selected, including 5 meters of cable per spotlight, 1 transformer with a connector.

1

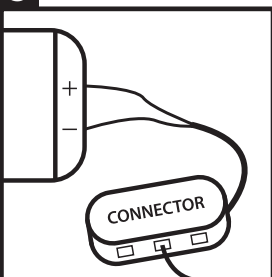

First, check whether all the parts are contained in the box, and test the set before installing it in its permanent place.

2

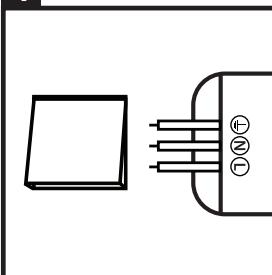

Drill the holes, size 35 mm, at the desired place. Next, position the wiring of the LED spots on the desired location. Place the LED spots in the drill holes. Bring the recessed spotlight into place, the spotlight snaps into place with the spirals.

3

Subsequently, link all the spots to the connector. The plugs should all be linked to the connector, as the system is connected in series. If the connector contains more ports than the amount of installed spots, please place a jumper (black jumper) in the remaining opening(s). Jumpers will be provided in the box (depending on the amount of spots and the type of connector).

4

Now you can connect the transformer to a 230V point (INPUT). ⚡ = green/yellow wire, N = blue wire and L = brown wire. We recommend to switch off the branch circuit beforehand! If you are connecting the spots to the main current, please link the transformer's INPUT with an on/off switch of the main current.

Your lightening is now ready for use. We wish you the best of luck with your purchase.
