

Please read this manual carefully before installing and using the spots. Do this for your own safety and to prevent damage of the product. This manual is applicable to the LED (veranda) recessed spots. The set is delivered ready for use with the amount of spots you selected, including 5 meters cable per spotlight and 1 transformer with connector. If you want to link the Hamulight app to the LED spotlights, you need to have a Hamulight Wifi LED receiver and the Hamulight app (free to download for iOS & Android). Please note that these are not included as standard.

1

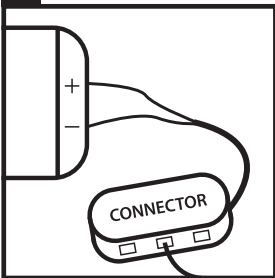

First, check whether all the parts are contained in the box, and test the set before installing it in its permanent place.

2

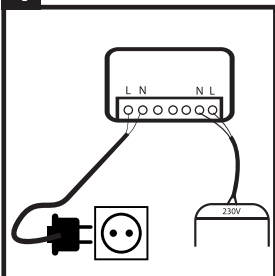

Drill the holes, size 42 mm, at the desired place. Next, position the wiring of the LED spots on the desired location. Place the LED spots in the drill holes. Now push up both spirals and position the spotlight.

3

Subsequently, link all the spots to the connector. The plugs should all be linked to the connector, as the system is connected in series. If the connector contains more ports than the amount of installed spots, please place a jumper (black jumper) in the remaining opening(s). Jumpers will be provided in the box (depending on the amount of spots and the type of connector).

4

Now you can connect the Wifi LED receiver to the transformer. N = blue wire and L = brown wire. We recommend to switch off the branch circuit beforehand! If you are connecting the spots to the main current, please link the transformer's INPUT with an on/off switch of the main current.

5

View the Hamulight Wifi LED receiver user manual to programme the receiver and control the lights via the app.

Your lightening is now ready for use. We wish you the best of luck with your purchase.
